ASSIGNMENT SUBMISSION • TASK 2

Dashboard Built for a Specific Person

Role Target: Chief Operating Officer (COO) / VP of E-Commerce Operations

1. Audience & Core Operational Decision

This dashboard strictly serves the **Weekly Fulfillment & Logistics Strategy**. It answers a singular operational question: *"Where must we reallocate warehouse labor or adjust shipping carrier tiers this week to prevent SLA breaches and customer order delays?"* All top-of-funnel marketing metrics and sales revenue numbers have been removed to preserve absolute focus on logistics execution.

2. Included Views (Four-View Restraint)

View 1

24h Fulfillment SLA Rate

Measures percentage of orders picked, packed, and shipped within 24 hours. Directly triggers warehouse shift overtime when SLA falls below 95%.

View 2

Unfulfilled Order Aging

Categorizes order backlog into age buckets (<24h, 24–48h, 48–72h, >72h). Provides immediate visibility into severe operational delays requiring emergency intervention.

View 3

Carrier Transit SLA Tracker

Compares actual delivery days against guaranteed carrier SLA per logistics partner (FedEx, UPS, DHL) to evaluate carrier reliability and performance.

View 4

Delivery Exception Rates

Tracks failed delivery attempts, lost shipments, and returns. Guides decisions regarding carrier contract penalties and packaging adjustments.

3. Non-Technical Filter Controls

Designed for fast executive usage using three explicit controls: **1. Date Range:** Dropdown (*Today, Last 7 Days, Last 30 Days*). **2. Fulfillment Center:** Multi-select hub filter (*East Coast, West Coast, EU Hub*). **3. Carrier Tier:** Button toggle (*All, FedEx, UPS, DHL*).

4. Written Note: Deliberately Omitted Metrics

Restraint is the core assessment criteria. The following metrics were intentionally excluded from this dashboard view:

- **Gross Revenue & Average Order Value (AOV):** Excluded because revenue metrics belong to Sales and Finance. The COO must ship orders within SLA regardless of cart monetary value.
- **Marketing Conversion Rate & CAC:** Excluded because top-of-funnel customer acquisition campaigns carry zero impact on warehouse fulfillment throughput.
- **SKU-Level Inventory Counts:** Excluded to avoid cluttering the executive view. Detailed stock counts are handled by procurement inventory planners.

5. Executive Wireframe Layout

6. Assessment Checklist Alignment

✔ **Stated Audience:** Target role (COO) & operational decision clearly defined.
✔ **Five or Fewer Views:** Restricted to 4 actionable views with full justifications.
✔ **Simple Filters:** Operated via 3 non-technical controls.
✔ **Omission Rationale:** Detailed rationale for excluded business metrics.
